***Allowable Subject Matter***

1. Claims 43-56 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The invention is directed to a display device capable of running in different power saving modes. Modes can be entered according to user selection or automatically and image quality is different according to the way a power saving mode is implemented.

Independent claims 43 and 48 identify the uniquely distinct features, "causing said display panel to shift to the first power saving mode or the third power saving mode from a normal mode based on an instruction of a user, and causing said display panel to shift automatically to the second power saving mode from the normal mode, wherein the shift from the normal mode to the second power saving mode does not involve reduction of a frame size of an image displayed on the display panel, and the shift from the normal mode to the first or third power saving mode involves a reduction of the frame size."

Chee et al. (US RE38108 E), hereinafter Chee, teaches a notebook computer having a number of power saving modes. In particular, Chee teaches going into a power saving mode based on a user instruction by means of closing the notebook cover and automatically into another power saving mode when inactivity is determined over a selected time interval. However, Chee does not teach nor suggest above claim features.
